<sup>\*</sup>Sugar unit III started its crushing from 30.8.2010

During the year under review the sugar prices remained flat throughout the year at uneconomical levels. The cost of inputs had increased substantially mainly due to steep increase in cane price. The stock of sugar was almost 60% of the total production resulting in increase of carrying cost

#### Co-generation of Power

The co-generation plants had generated 409.64 million units of power and exported 291.06 million units of power to grids compared to the generation of 245.58 million units and export of 168.78 million units in the previous year. The increase is due to the full year operation of co-generation plant at Unit-IV at Thiruvannamalai District. The dues on supply of power to the Tamilnadu and Karnataka Government grids are not settled in time and the delay has impacted the working capital finance of the company

### **Distillery Division**

During the year the distillery units had produced 25.95 million BLtrs of Alcohol as against 26.80 million BLtrs in the previous year

#### **Granite Division**

In the granite processing unit 110667 square metres of granite slabs and 13675 square metres of tiles were produced compared to production of 111658 square metres of granite slabs and 10722 square metres of tiles in the last year

#### Wind Mill

Wind Mills had generated 15.12 million units of power and exported 13.27 million units to grid compared to the generation of 16.77 million units and export of 15.18 million units

<sup>#</sup>Sugar unit IV commenced its operations on 27.1.2010

#### Prospects for the Current year 2011 - 2012

It is estimated to crush 30 lakh tones of sugarcane in aggregate. It is estimated to produce 16.5 million BLtrs of alcohol in the Distillery Unit in Tamilnadu and 15.8 million BLtrs of alcohol in Distillery Unit in Karnataka. The working results of the company are expected to be satisfactory

#### **Fixed Deposit**

Source: Indian Sugar Journal April 2011

During 2009 - 10 sugar season Karnataka and Tamil Nadu sugar factories had produced 25.58 lakh tonnes and 12.80 lakh tonnes sugar respectively.

#### **Indian sugar Price**

The Indian sugar prices did not move along with the world sugar prices on account of Government's policies with regard to exports and releases in the local market. Sugar prices remained flat at uneconomical levels throughout the year.

The levy sugar price most of the time is much lower than the free sugar price and the industry subsidizes the supply of sugar to public distribution system. This also has an adverse impact on the performance.

#### **Sugar Cane Price**

The Government of India made a very important amendment in the sugarcane (Control) Order by which Fair and Remunerative Price (FRP) is fixed by the Government of India after taking into consideration the cost of production of sugarcane including the cost of transportation and elements of profits and margins for sugarcane farmers on account of risk.

The FRP fixed by the Central Government for the season 2010 - 2011 is Rs 139.12 per quintal linked to a basic recovery of 9.5% sugar with a premium of Rs 1.46 for every 0.1% point increase in recovery. Since FRP is fixed after taking into consideration of all the relevant factors there must not be any room for any other authority to increase the price already fixed. However both the Tamilnadu and Karnataka governments had advised to pay higher price than FRP fixed by the Central Government. FRP for 2011 - 2012 has been announced fixing the price at Rs 145 per quintal for 9.5% recovery with a premium of Rs 1.53 for every 0.1% increase in the recovery

The raw material cost plays a very vital role in determining the financial performance of sugar companies. Any unreasonable increase in sugarcane price adversely affects the profitability and in the long run it would have impact on the payments to be made to the cane growers

#### **Opportunities**

The sugar production in India is expected to be at 250 lakh tonnes in 2010 - 2011 season compared to 189.12 lakh tonnes in 2009 - 2010 season. Sugar plants are expected to function at optimum levels in 2011 - 2012 season also

The Central Electricity Regulatory Commission (CERC) is currently undertaking several positive measures for co-generation. These measures include generic tariff norms for co-generation projects; norms and pricing framework for Renewable Energy Certificates (RECs) and amendment of the provisions of the grid code to ensure smoother off take and transmission of power by utilities. Further State Electricity Regulatory Commissions (SERCs) in some key sugar producing states have also taken proactive measures such as increasing co-generation tariffs, permitting third-party sales, allowing usage of coal in off-season and power off take at preferential rates

Integrated sugar plants are expected to perform satisfactorily

The increased quantity wise consumption of ethanol in petroleum products would benefit the industry immensely depending upon the Government policy with regard to price and implementation

#### **Threats**

The Government's policy towards controlling the prices of sugar artificially through export regulations and release mechanism result in financial chocking of the sugar companies. The continued increase of price of sugarcane without correlation to the sugar prices also has adverse impact on the results

With regard to co-generation there are inconsistencies in tariff norms, incentives and regulatory policies of different states. There is no fixed long-term policy

In respect of ethanol revised price fixing and blending policies are yet to be finalized leaving uncertainties for planning

#### Internal Control Systems and their Adequacy

The areas of operation have been segregated and various checks and controls have been implemented. The checks and controls are reviewed for improvement in each of the operational area on periodical basis. The checks and control system in these areas are considered adequate

Your company has always adopted a policy of transparency and accountability. Work place environment in all the factories of the company is probably one of the best in the country. The safety and hygiene are given utmost importance in the work place and related areas. Imparting training is an ongoing process in the company

- We have undertaken conservation and preservation measures to minimise the impact of our operation on the environment of production units and its surrounding
- The production of sugar from sugarcane generates waste water streams which are of bio-gradable nature and are treated efficiently in the well build anaerobic system leading to Biogas generation. The Biogas thus generated is being utilised for power generation. The treated effluent is settled and utilised for R & D cane farm irrigation and tree plantation
- One of the by-product of sugar manufacture, the press-mud waste find use as farmland manure and in production of nutrient rich Bio-Compost manure
- In the area of distillation, the treated spent wash water along with pressmud waste turns into a valuable bio-compost manure at the full fledged compositing facility established
- All the manufacturing facilities are provided with better environmental management systems with aesthetic green belt environment with tree plantation. Rain water harvesting is not only carried - out at factories but also promote construction of rain water harvesting ponds at surrounding village levels. We supply free tree seedling to promote the green belt movement in the area.
- We have initiated the construction of check dams across the streams flowing from western ghats which forms part of our operational areas to improve ground water level which will ensure better Agriculture
- We are in the process of advocating and giving financial assistance for establishing drip irrigation in sugarcane agriculture which gives better water saving, fertilizer use efficiency and high productivity

#### **Community Development Programmes**
